MEASUREMENTS

Nominal size	Clamping range	Width	Thickness	Tightening torque
DN	outer d <sub>3</sub> mm	mm	mm	Nm
200	230-265	150	7,5	6

BRIEF DESCRIPTION

The universal solution for connecting normal-strength and extra-strength pipes: one coupling for four different applications. Not only do dealers and construction companies reduce storage space, it also prevents confusion: it can be used for all applications with the same diameter. In addition, the COUPLING.Pro is also highly economical. A further advantage: the integrated RE-system.

Due to its width, the Coupling.Pro has 2 tensioning straps for DN 200 and 3 tensioning straps for DN 250 and DN 300.

ADVANTAGES

- Robust and especially safe thanks to amount of material used
- Complies with EN 295 for tightness, angular deflection, and shear load
- Minimization of stocks in trade depots and on construction sites
- No confusion possible
- Includes the RE-system
